Piazza della Pilotta 4, Roma

The 2030 Plan for renewable and smart energy: the opportunities for the Italian supply chain

The increase of renewable generation capacity needed to meet the EU decarbonization and energy independence 2030 targets, along with a robust reinforcement/enhancement of the Italian supply chain can bring economic benefits of up to 361 billion € and create up to 540.000 new jobs.

Italy already relies on a valuable national supply chain of successful businesses operating in this sector, with remarkable growth potential that can be unlocked taking advantage of the opportunities of the transition and leveraging on the innovation potential of Italian areas of excellence in technology and know-how.

These are the main conclusions of the study "The 2030 Plan for renewable and smart energy: benefits for the Italian supply chain" **carried out by Enel Foundation** in collaboration with **Elettricità Futura** and **Althesys** presented in an event in **Rome** on **February 8**, in the presence of:

Gilberto Picchetto Fratin, Ministry of Environment and Energy Security

Adolfo Urso, Ministry of Enterprises and Made in Italy.

Agostino Re Rebaudengo, President of Elettricità Futura

Francesco Starace, Enel CEO and Enel Foundation Chairman

Alessandro Marangoni, CEO Althesys

Here are the main findings of the study and here is the full report.
